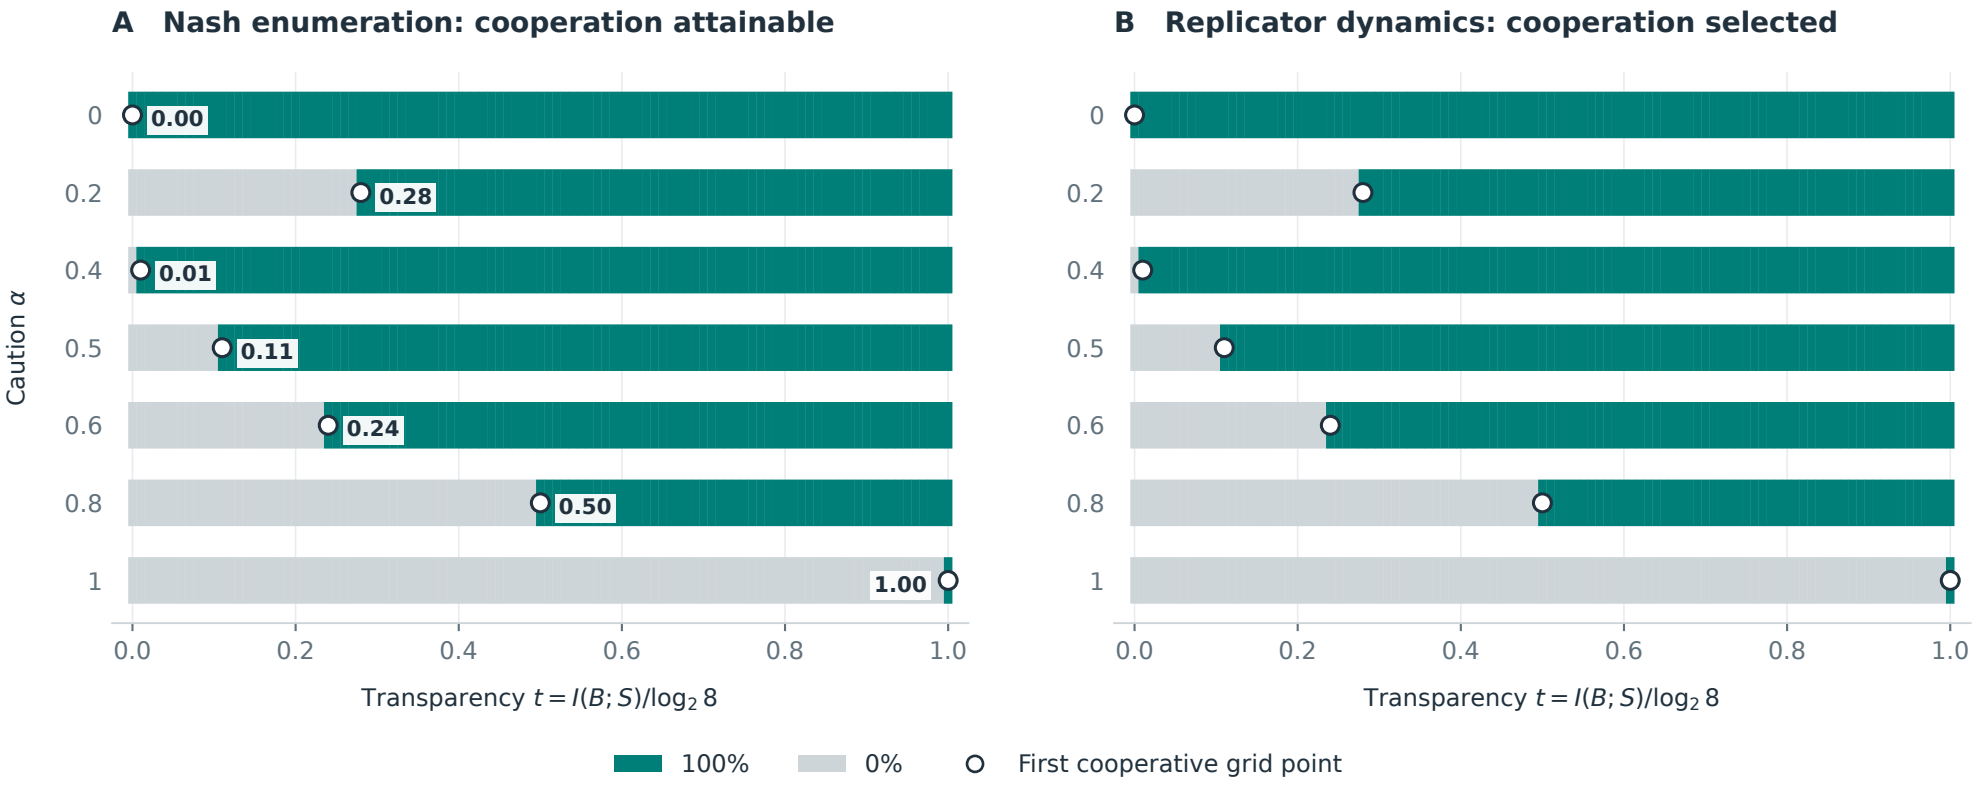
Transparency unlocks cooperative equilibria

Behavioral signals | Eight-program library, floor case | Cooperation = Pr[(C, C)]



Exact Nash maxima and observed cooperative basins agree at all 707 grid points (transparency spacing 0.01).
1,000 shared initial populations per game; 62 distinct games. Rings locate the sampled onsets.
Pointwise 95% basin intervals: [99.62%, 100%] for 1,000/1,000 successes; [0%, 0.38%] for 0/1,000.
