a
Mean over the six cautions α ∈ {0.2, 0.4, 0.5, 0.6, 0.8, 1}
Pr[(C, C)]
1
0.5
0
At equilibrium: best Nash = replicator outcome
Before selection: uniform population of the eight bots
b
Fully cooperative Nash equilibrium, reached from every start
Only fully defecting equilibria
Caution α
1
0.8
0.6
0.5
0.4
0.2
0
t* = 1
defection
t* = 0.5
t* = 0.24
t* = 0.11
cooperation
t* = 0.01
t* = 0.28
α = 0: every bot cooperates whatever its signal
0
0.2
0.4
0.6
0.8
1
Transparency t
← opaque: the signal is uniform
full: the signal is the opponent's program →
